a radially outwardly-extending collar located radially outwardly of the axial groove, and a radially outwardly-extending flange which is spaced from the collar to define a radially inwardly-extending recess there between on the second coupling part;

defining an axial groove which has an open end facing the first coupling part, said axial groove providing said second coupling part with inner and outer legs, and locking means which engage said inner and outer legs of said second coupling part to prevent divergence thereof;

as recited in claims 29 and 30.
